Strategy Layer

Access Management

Type	Capability

The ability to manage user access and permissions across datasets and systems, ensuring that only authorized users can interact with sensitive data.

Access Management (copy)

Type	Capability

The ability to manage user access and permissions across datasets and systems, ensuring that only authorized users can interact with sensitive data.

Actionable Data Management Plan

Type	Capability

Capability to create machine-readable data management plans, share and update them through interfaces. Ability to actively utilize the machine-readable features of the data management plan to facilitate the researcher's work throughout the research process.

Actionable Data Management Plan (copy)

Type	Capability

Capability to create machine-readable data management plans, share and update them through interfaces. Ability to actively utilize the machine-readable features of the data management plan to facilitate the researcher's work throughout the research process.

Anonymization and Pseudonymization

Type	Capability

Anonymization and Pseudonymization (copy)

Type	Capability

API Management

Type	Capability

Skills in developing and managing APIs (Application Programming Interfaces) that enable efficient and secure access to datasets and research tools.

API Management (copy)

Type	Capability

Skills in developing and managing APIs (Application Programming Interfaces) that enable efficient and secure access to datasets and research tools.

Artificial Intelligence

Type	Capability

> Expertise in leveraging machine learning and artificial intelligence to gain insights from large datasets, including the ability to apply advanced analytics techniques for pattern recognition, prediction, and data mining.

Artificial Intelligence (copy)

Type	Capability

> Expertise in leveraging machine learning and artificial intelligence to gain insights from large datasets, including the ability to apply advanced analytics techniques for pattern recognition, prediction, and data mining.

Change Management

Type	Capability

> The knowledge to plan and manage changes in data infrastructure, governance policies, or technology systems to adapt to evolving research needs.

Change Management (copy)

Type	Capability

> The knowledge to plan and manage changes in data infrastructure, governance policies, or technology systems to adapt to evolving research needs.

Cloud Architectures

Type	Capability

> The ability to leverage cloud computing resources to build scalable, flexible, and cost-effective data infrastructures for research.

Cloud Architectures (copy)

Type	Capability

> The ability to leverage cloud computing resources to build scalable, flexible, and cost-effective data infrastructures for research.

Cumulative and Big Data

Type	Capability

> Experise in transfer, storage, and processing of large data volumes. Knowledge in applying data compression techniques to manage large volumes of data without sacrificing data quality or performance. Skills in managing and processing datasets that grow incrementally over time. Expertise in handling and processing large datasets, including the infrastructure and computational techniques required to manage them effectively.

Cumulative and Big Data (copy)

Type	Capability

Experise in transfer, storage, and processing of large data volumes. Knowledge in applying data compression techniques to manage large volumes of data without sacrificing data quality or performance. Skills in managing and processing datasets that grow incrementally over time. Expertise in handling and processing large datasets, including the infrastructure and computational techniques required to manage them effectively.

Data Analytics And Reporting

Type	Capability

Skills in applying analytical techniques to interpret large datasets and generate insights that inform research findings and reporting.

Data Analytics And Reporting (copy)

Type	Capability

Skills in applying analytical techniques to interpret large datasets and generate insights that inform research findings and reporting.

Data Citation and Attribution

Type	Capability

Knowledge in assigning proper citations and credit for datasets, ensuring that data creators are appropriately acknowledged in research outputs.

Data Citation and Attribution (copy)

Type	Capability

Knowledge in assigning proper citations and credit for datasets, ensuring that data creators are appropriately acknowledged in research outputs.

Data Curation

Type	Capability

Skills in managing and preserving datasets over time, including the selection, organization, and validation of research data for long-term use.

Data Curation (copy)

Type	Capability

Skills in managing and preserving datasets over time, including the selection, organization, and validation of research data for long-term use.

Data Discovery Architecture

Type	Capability

Skills in designing infrastructures that allow researchers and other stakeholders to find and access relevant datasets

Data Discovery Architecture (copy)

Type	Capability

Skills in designing infrastructures that allow researchers and other stakeholders to find and access relevant datasets

Data Encryption

Type	Capability

Skills in applying encryption techniques to protect data at rest and in transit, ensuring its confidentiality and integrity.

Data Encryption (copy)

Type	Capability

Skills in applying encryption techniques to protect data at rest and in transit, ensuring its confidentiality and integrity.

Data Engineering

Type	Capability

Skills needed to build, optimize, and manage the systems and pipelines that store, process, and analyze research data.

Data Engineering

Type	Capability

Data Engineering (copy)

Type	Capability

Skills needed to build, optimize, and manage the systems and pipelines that store, process, and analyze research data.

Data Ethics

Type	Capability

Expertise in ensuring that data collection, use, and dissemination uphold ethical standards, particularly when handling sensitive or personal data.

Data Ethics (copy)

Type	Capability

Expertise in ensuring that data collection, use, and dissemination uphold ethical standards, particularly when handling sensitive or personal data.

Data Licensing

Type	Capability

Understanding various types of data licenses (e.g., open, restricted) and applying them to protect intellectual property while enabling appropriate data sharing.

Data Licensing (copy)

Type	Capability

Understanding various types of data licenses (e.g., open, restricted) and applying them to protect intellectual property while enabling appropriate data sharing.

Data Lineage

Type	Capability

Experise in defining data workflows that preserves the history and lineage of the data to maintain accountability and transparency in data use.

Data Lineage (copy)

Type	Capability

Experise in defining data workflows that preserves the history and lineage of the data to maintain accountability and transparency in data use.

Data Policies

Type	Capability

Knowledge of creating and enforcing institutional data policies that govern the collection, storage, sharing, and use of data.

Data Policies (copy)

Type	Capability

Knowledge of creating and enforcing institutional data policies that govern the collection, storage, sharing, and use of data.

Data Preservation

Type	Capability

Expertise to protect data from being lost or destroyed using national guidelines and research domain spesific best practices

Data Processing

Type	Capability

The capability to design, optimize, and run data processing workflows that clean, transform, and analyze raw data for domain-spesific research purposes.

Data Processing (copy)

Type	Capability

The capability to design, optimize, and run data processing workflows that clean, transform, and analyze raw data for domain-spesific research purposes.

Data Publication

Type	Capability

Data Quality

Type	Capability

Expertise in ensuring the accuracy, completeness, and consistency of data throughout its lifecycle, including the identification and resolution of data quality issues.

Data Quality (copy)

Type	Capability

Expertise in ensuring the accuracy, completeness, and consistency of data throughout its lifecycle, including the identification and resolution of data quality issues.

Data Rights and Legal Compliance

Type	Capability

The knowledge and practices required to ensure that research data is managed and shared according to applicable laws, licenses, regulations and ethical guidelines.

Data Rights and Legal Compliance (copy)

Type	Capability

The knowledge and practices required to ensure that research data is managed and shared according to applicable laws, licenses, regulations and ethical guidelines.

Data Security

Type	Capability

Expertise in implementing security measures, including encryption, access controls, and monitoring, to protect research data from unauthorized access or breaches.

Data Security (copy)

Type	Capability

Expertise in implementing security measures, including encryption, access controls, and monitoring, to protect research data from unauthorized access or breaches.

Data Stewardship

Type	Capability

The capability to oversee data throughout its lifecycle, ensuring it remains accurate, accessible, and aligned with institutional policies. Skills in managing the various stages of the data lifecycle (collection, generation, gathering, processing, analysis, publication, sharing, preservation, archiving, disposal, reuse).

Data Stewardship

Type	Capability

Data Stewardship (copy)

Type	Capability

The capability to oversee data throughout its lifecycle, ensuring it remains

accurate, accessible, and aligned with institutional policies. Skills in managing the various stages of the data lifecycle (collection, generation, gathering, processing, analysis, publication, sharing, preservation, archiving, disposal, reuse).

Data Valuation and Meritation

Type	Capability

Expertise in creating policies and evaluating the value of data based on its quality, relevance, and potential for reuse within research contexts and across domains.

Data Valuation and Meritation (copy)

Type	Capability

Expertise in creating policies and evaluating the value of data based on its quality, relevance, and potential for reuse within research contexts and across domains.

Data Versioning and Provenance

Type	Capability

Expertise in creating metadata for tracking changes to datasets over time and ensuring a record of their origin, modifications, and history.

Data Versioning and Provenance (copy)

Type	Capability

Expertise in creating metadata for tracking changes to datasets over time and ensuring a record of their origin, modifications, and history.

Data Visualization

Type	Capability

Skills in visualizing large datasets and generating insightful reports, allowing researchers to easily interpret and communicate their findings.

Data Visualization (copy)

Type	Capability

Skills in visualizing large datasets and generating insightful reports, allowing researchers to easily interpret and communicate their findings.

Database Management

Type	Capability

The capability to design, implement, and maintain efficient and secure databases that store and organize research data.

Database Management (copy)

Type	Capability

The capability to design, implement, and maintain efficient and secure databases that store and organize research data.

Domain Architectures

Type	Capability

Knowledge of designing domain specific data architectures tailored to particular research area, ensuring that reasearch area specific needs are met.

Domain Architectures (copy)

Type	Capability

Knowledge of designing domain specific data architectures tailored to particular research area, ensuring that reasearch area specific needs are met.

Edge Computing

Type	Capability

Skills in processing data at the edge of the network, close to the data source, reducing latency and enhancing the efficiency of real-time data analysis.

Edge Computing (copy)

Type	Capability

Skills in processing data at the edge of the network, close to the data source, reducing latency and enhancing the efficiency of real-time data analysis.

FAIR Principles

Type	Capability

Expertise in applying the principles of Findability, Accessibility, Interoperability, and Reusability to research data management practices.

FAIR Principles (copy)

Type	Capability

Expertise in applying the principles of Findability, Accessibility, Interoperability, and Reusability to research data management practices.

Green Data Architecture

Type	Capability

Knowledge of designing energy-efficient data systems that minimize environmental impact, promoting sustainability in research infrastructures.

Green Data Architecture (copy)

Type	Capability

Knowledge of designing energy-efficient data systems that minimize environmental impact, promoting sustainability in research infrastructures.

Information Architecture

Type	Capability

> Expertise needed to design FAIR information architectures that enhances data usability, findability, accessibility and interoperability.

Information Architecture (copy)

Type	Capability

> Expertise needed to design FAIR information architectures that enhances data usability, findability, accessibility and interoperability.

Infrastructure scalability

Type	Capability

> Competencies in designing and maintaining infrastructures that can scale up to accommodate growing data volumes and increased complexity.

Infrastructure scalability (copy)

Type	Capability

> Competencies in designing and maintaining infrastructures that can scale up to accommodate growing data volumes and increased complexity.

Integration Development

Type	Capability

> The ability to integrate disparate data systems and tools, ensuring seamless interaction and data exchange across platforms and applications.

Integration Development (copy)

Type	Capability

> The ability to integrate disparate data systems and tools, ensuring seamless interaction and data exchange across platforms and applications.

Intellectual Property Rights

Type	Capability

> Skills in understanding, protecting and managing intellectual property rights related to data ownership and usage within the framework of research.

Intellectual Property Rights (copy)

Type	Capability

> Skills in understanding, protecting and managing intellectual property rights related to data ownership and usage within the framework of research.

Interoperability

Type	Capability

Interoperability and Standards

Type	Capability

Knowledge of relevant data standards within specific fields and understanding and applying of generic data standards (such as W3C standards, ISO, etc.) to ensure that datasets can be exchanged and understood across different systems and disciplines.

Interoperability and Standards (copy)

Type	Capability

Knowledge of relevant data standards within specific fields and understanding and applying of generic data standards (such as W3C standards, ISO, etc.) to ensure that datasets can be exchanged and understood across different systems and disciplines.

Interoperability Frameworks

Type	Capability

Expertise in designing and implementing architectures that ensure seamless data exchange and compatibility between different systems, platforms, and formats. Ensuring that data management systems can interact with other systems, allowing secure data exchange and cross-collaboration. Capability to co-develop data specifications supporting interoperability within and across research domains. Readiness to apply recommendations and standards, and participate in national and international standardization organizations.

Interoperability Frameworks (copy)

Type	Capability

Expertise in designing and implementing architectures that ensure seamless data exchange and compatibility between different systems, platforms, and formats. Ensuring that data management systems can interact with other systems, allowing secure data exchange and cross-collaboration. Capability to co-develop data specifications supporting interoperability within and across research domains. Readiness to apply recommendations and standards, and participate in national and international standardization organizations.

Legal Framework

Type	Capability

Knowledge of relevant laws and regulations governing data use, such as GDPR, copyright law, and privacy policies, ensuring compliance in the research domain.

Legal Framework (copy)

Type	Capability

Knowledge of relevant laws and regulations governing data use, such as GDPR, copyright law, and privacy policies, ensuring compliance in the research domain.

Master and Reference Data Architecture

Type	Capability

The ability to ensure the consistency, accuracy, and integrity of master data across multiple systems, datasets and research projects. Expertise in organizing and managing reference datasets, which provide consistent data for use across research projects and domains.

Master and Reference Data Architecture (copy)

Type	Capability

The ability to ensure the consistency, accuracy, and integrity of master data across multiple systems, datasets and research projects. Expertise in organizing and managing reference datasets, which provide consistent data for use across research projects and domains.

Master Data Management (copy)

Type	Capability

The ability to ensure the consistency, accuracy, and integrity of master data across multiple datasets and research projects.

Metadata Architecture

Type	Capability

Expertise needed to develop and manage metadata that support the effective discovery, interpretation, use and reuse of research data.

Metadata Architecture (copy)

Type	Capability

Expertise needed to develop and manage metadata that support the effective discovery, interpretation, use and reuse of research data.

Metadata Harmonization and Crosswalks

Type	Capability

Skills in building harmonizing architectures and reconciling and mapping different metadata schemas across disciplines, promoting interoperability and cross-disciplinary research.

Metadata Harmonization and Crosswalks (copy)

Type	Capability

Skills in building harmonizing architectures and reconciling and mapping different metadata schemas across disciplines, promoting interoperability and cross-disciplinary research.

MyData

Type	Capability

MyData Principles

Type	Capability

Skills in managing personal data with a user-centric approach, allowing individuals to control the usage, sharing, and storage of their data.

MyData Principles (copy)

Type	Capability

Skills in managing personal data with a user-centric approach, allowing individuals to control the usage, sharing, and storage of their data.

Ontology Development

Type	Capability

Knowledge of creating and managing ontologies and linked data to facilitate understanding, data categorization and interoperability.

Ontology Development (copy)

Type	Capability

Knowledge of creating and managing ontologies and linked data to facilitate understanding, data categorization and interoperability.

Persistent Identifiers

Type	Capability

The ability to assign and manage unique, permanent identifiers (e.g., DOI, ORCID) to datasets, ensuring long-term findability and reference. The use of persistent identifiers enhances data management and enables, for example, the formation of knowledge graphs and supports the repeatability and automation of research.

Persistent Identifiers (copy)

Type	Capability

The ability to assign and manage unique, permanent identifiers (e.g., DOI, ORCID) to datasets, ensuring long-term findability and reference. The use of persistent identifiers enhances data management and enables, for example, the formation of knowledge graphs and supports the repeatability and automation of research.

Preservation Architecture

Type	Capability

Expertise in designing infrastructure for the long-term storage and preservation of datasets, ensuring their availability for future use.

Preservation Architecture (copy)

Type	Capability

Expertise in designing infrastructure for the long-term storage and preservation of datasets, ensuring their availability for future use.

Project Funding

Type	Capability

> Skills in identifying funding opportunities, writing grant applications, and securing financial support for research projects and data infrastructure.

Project Funding (copy)

Type	Capability

> Skills in identifying funding opportunities, writing grant applications, and securing financial support for research projects and data infrastructure.

Project planning

Type	Capability

> The capability to define research objectives, timelines, resources and requirements, ensuring efficient execution and alignment with institutional goals and funding agencies requirements.

Project planning (copy)

Type	Capability

> The capability to define research objectives, timelines, resources and requirements, ensuring efficient execution and alignment with institutional goals and funding agencies requirements.

Real-Time Data Processing

Type	Capability

> Expertise in processing streaming data in real-time, useful in fields like sensor data analysis or financial research.

Real-Time Data Processing (copy)

Type	Capability

> Expertise in processing streaming data in real-time, useful in fields like sensor data analysis or financial research.

Reproducible Research

Type	Capability

> The ability to design research workflows and processes that allow for data and research findings to be consistently reproduced by others, promoting transparency.

Reproducible Research (copy)

Type	Capability

> The ability to design research workflows and processes that allow for data and research findings to be consistently reproduced by others, promoting transparency.

Research Data Governance

Type	Capability

Planning data management to support the research process. Capability to comprehensively develop support processes and services toward interoperable data management planning and guidance. Requires collaboration between organizations providing support services at both local and national levels.

Research Data Governance encompasses the skills and knowledge required to establish and enforce policies, procedures, and frameworks that govern the management of research data. It ensures that data is handled responsibly, ethically, and in compliance with legal and institutional standards. Key areas include risk management, policy development, data valuation, and fostering collaborations within and outside institutions. Governance ensures that data is used effectively, securely, and sustainably, supporting long-term research goals and data stewardship.

Research Data Governance (copy)

Type	Capability

Planning data management to support the research process. Capability to comprehensively develop support processes and services toward interoperable data management planning and guidance. Requires collaboration between organizations providing support services at both local and national levels.

Research Data Governance encompasses the skills and knowledge required to establish and enforce policies, procedures, and frameworks that govern the management of research data. It ensures that data is handled responsibly, ethically, and in compliance with legal and institutional standards. Key areas include risk management, policy development, data valuation, and fostering collaborations within and outside institutions. Governance ensures that data is used effectively, securely, and sustainably, supporting long-term research goals and data stewardship.

Research Data Management

Type	Capability

Research Data Management

Type	Capability

Capability to produce and manage data throughout the research process, ensuring sufficient information on the origin and lifecycle of the data. Research data is managed throughout its lifecycle, ensuring its controlled collection, creation, sharing, storage, archiving, destruction, and publication.

Research Data Management (copy)

Type	Capability

Capability to produce and manage data throughout the research process, ensuring sufficient information on the origin and lifecycle of the data. Research data is managed throughout its lifecycle, ensuring its controlled collection, creation,

sharing, storage, archiving, destruction, and publication.

Research Data Process Development

Type	Capability

Expetise to design, optimize, and implement processes that support the full lifecycle of research data.

Research Data Process Development (copy)

Type	Capability

Expetise to design, optimize, and implement processes that support the full lifecycle of research data.

Research Dataset Metadata

Type	Capability

Skills in creating and managing metadata (DCAT, DataCite, etc.) that accurately describes research datasets, improving their accessibility and reusability.

Research Dataset Metadata (copy)

Type	Capability

Skills in creating and managing metadata (DCAT, DataCite, etc.) that accurately describes research datasets, improving their accessibility and reusability.

Research Infrastructure Architecture

Type	Capability

Expertise needed to design, build, and maintain the physical and digital architectures that support research data management in different research domains

Research Infrastructure Architecture (copy)

Type	Capability

Expertise needed to design, build, and maintain the physical and digital architectures that support research data management in different research domains

Research Methods

Type	Capability

Understanding a variety of quantitative and qualitative research methodologies and how data management is embedded within these methods.

Research Methods (copy)

Type	Capability

Understanding a variety of quantitative and qualitative research methodologies and how data management is embedded within these methods.

Research Networking and Collaboration

Type	Capability

Capability to leverage national and international collaboration to advance data management. Skills to foster partnerships between researchers, institutions, and other stakeholders to facilitate the exchange of knowledge and data.

Research Networking and Collaboration (copy)

Type	Capability

Capability to leverage national and international collaboration to advance data management. Skills to foster partnerships between researchers, institutions, and other stakeholders to facilitate the exchange of knowledge and data.

Research, Development and Innovation

Type	Capability

Capability to commercialize research results, especially research data.

Research, Development and Innovation (copy)

Type	Capability

Capability to commercialize research results, especially research data.

Risk Management

Type	Capability

Ability to identify, assess, and mitigate risks related to research data handling, storage, sharing, and legal compliance.

Risk Management (copy)

Type	Capability

Ability to identify, assess, and mitigate risks related to research data handling, storage, sharing, and legal compliance.

Scientific computing

Type	Capability

Skills in leveraging high-performance computing (HPC) and other advanced computing systems to process and analyze large, complex datasets.

Scientific computing (copy)

Type	Capability

Skills in leveraging high-performance computing (HPC) and other advanced computing systems to process and analyze large, complex datasets.

Search Engine Optimization

Type	Capability

> The ability to optimize metadata and dataset descriptions to ensure that research data is easily discoverable through search engines.

Search Engine Optimization (copy)

Type	Capability

> The ability to optimize metadata and dataset descriptions to ensure that research data is easily discoverable through search engines.

Sensitive Data Architecture

Type	Capability

> Skills in building data infrastructures that securely store and manage sensitive or confidential information, adhering to privacy regulations.

Sensitive Data Architecture (copy)

Type	Capability

> Skills in building data infrastructures that securely store and manage sensitive or confidential information, adhering to privacy regulations.

Service Development

Type	Capability

> Expertise in developing and enhancing research data services, ensuring they are accessible, user-friendly, and aligned with the needs of researchers and institutions.

Service Development (copy)

Type	Capability

> Expertise in developing and enhancing research data services, ensuring they are accessible, user-friendly, and aligned with the needs of researchers and institutions.

Software Development

Type	Capability

> Generic expertise in software development and programming languages

Software Development (copy)

Type	Capability

> Generic expertise in software development and programming languages

User Management

Type	Capability

Workflows, Pipelines and Deployment

Type	Capability

> Expertise in designing and automating data workflows and pipelines to efficiently process and move data from source to storage and analysis. Skills in using container technologies (e.g., Docker, Kubernetes) to deploy scalable, portable data processing environments.

Workflows, Pipelines and Deployment (copy)

Type	Capability

> Expertise in designing and automating data workflows and pipelines to efficiently process and move data from source to storage and analysis. Skills in using container technologies (e.g., Docker, Kubernetes) to deploy scalable, portable data processing environments.

Data Integration & Interoperability

Type	Business Process

> The process of combining data from different sources and ensuring it works together in a seamless, interoperable manner, allowing systems to share and interpret data effectively.

Data Management Plan

Type	Business Process

> Encompasses the creation and maintenance of the research plan and data management plan, including preparing for data acquisition, selecting formats and storage solutions, and anticipating sharing and dissemination strategies to guide data management throughout the research lifecycle.

Data Preservation

Type	Business Collaboration

Data Processing

Type	Business Process

> Encompasses actions taken to refine and analyze raw or acquired data by researchers, using tools and programs, to yield processed data ready for observations and conclusions.

Data Production

Type	Business Process

> Focuses on the creation, collection, or acquisition of raw research data, either generated internally or sourced externally, through experimental or computational methods.

Data Publication

Type	Business Process

> Covers the external dissemination of both raw and processed research data, ensuring access for the wider community while adhering to policies on public sharing, use, and reuse.

Data Quality Monitoring

Type	Business Process

> The process of ensuring that data meets defined standards of accuracy, consistency, and reliability, critical for effective decision-making and analysis.

Data Standardization

Type	Business Collaboration

> Collaborative process for developing common standards for data and ensuring that data across different systems or organizations conforms to agreed format and structure.

Director

Type	Business Actor

FAIR Data Lifecycle

Type	Business Process

> The process that encompasses all phases of research data management, from planning, collection, processing, preservation, to sharing and reuse adhering to FAIR and CARE principles.

FAIR Data Lifecycle

Type	Business Collaboration

FAIR Data Support

Type	Business Function

FAIR Infrastructure Governance

Type	Business Process

> The structured process of managing and regulating the infrastructure required for ensuring that data adheres to FAIR principles.

FAIR Publication Support

Type	Business Function

FAIR Research Support

Type	Business Function

FAIR Workflow Support

Type	Business Function

FAIR Workflow Support

Preservation Support

Type	Business Function

Preserve, Discard, Reuse

Type	Business Process

> Defines the processes for long-term data management, including archival or disposal of research data, ensuring compliance with records management practices and safe data handling at the end of its lifecycle.

Project consulting

Type	Business Function

Project Proposal

Type	Business Process

> Establishes the strategic direction and decisions for an organization’s research data program, integrating it with broader data governance strategies to align with organizational goals.

Project support

Type	Business Actor

Publication Support

Type	Business Actor

Reference & Master Data Management

Type	Business Process

> The process of managing key data entities (reference and master data) that are critical for the operation of the research infrastructure. This process includes definition of common terminologies, taxonomies and codelists using standards and best practices from the research domain.

Research Data Infrastructure

Type	Business Service

Research Data Infrastructure

Type	Business Process

Research Data Management

Type	Business Collaboration

Research Support

Type	Business Actor

Application Layer

Access control

Type	Application Process

> The process of managing how the raw data sources are accessed

Clean Data Source

Type	Application Service

> A source of data that has been cleaned to remove errors, inconsistencies, and redundancies, ensuring higher quality.

Cleaned Data

Type	Data Object

> Data that has undergone a cleaning process to remove errors, inconsistencies, and duplicate entries, ensuring higher quality and usability.

Cleaning

Type	Application Process

> The process of detecting and correcting (or removing) corrupt or inaccurate records from a dataset, improving data quality.

Collection

Type	Application Process

> The process of gathering and storing data from different sources for further analysis or processing.

Data Cleaning Component

Type	Application Component

> A system or software component responsible for the cleaning and preprocessing of raw data before it is used for analysis or further processing.

Data Graph

Type	Data Object

> A structured representation of data in a graph format, showing relationships between entities, typically used in graph databases or semantic web applications.

Data Harmonization Component

Type	Application Component

> A software system or module designed to ensure that data from different sources conforms to a common format or structure, enabling interoperability and consistency.

Data Harmonization Pipeline

Type	Application Process

> A structured process that ensures data is transformed into a common format or standard for ease of use across different systems or databases.

Data Ingestion Component

Type	Application Component

> A system or tool responsible for collecting and integrating data from various sources into a central repository for analysis or further processing.

Data preservation

Type	Application Process

> The process of maintaining and safeguarding data to ensure its long-term accessibility and usability.

Data Processing Component

Type	Application Component

> A system or tool that applies transformations, aggregations, and calculations to raw data, preparing it for analysis or reporting.

Data Processing Pipeline

Type	Application Process

> A sequence of operations to process and transform raw data into a usable format or output, often through a combination of software applications and processes.

Data Product

Type	Data Object

> A product or output that is generated from processing or analyzing raw data, designed to provide insights, services, or solutions.

Data Streams

Type	Data Object

> Continuous flows of data generated by various sources, often in real-time, used for monitoring, analysis, and decision-making.

Deduplication

Type	Application Process

> The process of identifying and removing duplicate records from a dataset to ensure uniqueness and data quality.

Digital Twin

Type	Data Object

A digital replica of a physical entity, process, or system used for simulation, analysis, and monitoring.

Dumb Data

Type	Data Object

Data that lacks context, structure, or meaningful metadata, making it difficult to use or interpret effectively.

Dumb Data Lake

Type	Data Object

A storage repository that holds a vast amount of raw data in its native format, typically without any preprocessing or structuring.

FAIR Data

Type	Data Object

Data that is Findable, Accessible, Interoperable, and Reusable, adhering to the FAIR principles.

Fair Data Source

Type	Application Service

A data source that adheres to the FAIR principles (Findable, Accessible, Interoperable, and Reusable), ensuring data quality and compliance with FAIR standards.

Fair Data Workflow

Type	Data Object

A set of processes and procedures designed to handle data in a manner that adheres to FAIR principles.

Fair Digital Object

Type	Data Object

A FAIR digital object is a unit composed of data that is a sequence of bits, or a set of sequences of bits, each of the sequences being structured (typed) in a way that is interpretable by one or more computer systems, and having as essential elements an assigned globally uniqueandpersistent identifier (PID), a type definition for the object as a whole and a metadata description (which itself can be another FAIR digital object) of the properties of the object, making the whole findable, accessible, interoperable and reusable both by humans and computers for the reliable interpretation and processing of the data represented by the object (TSIG FDO WG).

Fair Publication Component

Type	Application Component

A system or tool that manages the process of publishing data in a manner that conforms to FAIR principles, ensuring that data is Findable, Accessible,

Interoperable, and Reusable.

Fair Publication Pipeline

Type	Application Process

The structured workflow for publishing data in a manner that adheres to FAIR principles (Findable, Accessible, Interoperable, and Reusable).

Fair Research Dataset

Type	Data Object

A research dataset that complies with FAIR principles, making it easily discoverable and usable by others.

FAIR validation

Type	Application Process

The process of verifying whether data adheres to FAIR principles, ensuring it is findable, accessible, interoperable, and reusable.

FAIR Validation Component

Type	Application Component

A tool or system that checks whether data adheres to FAIR principles, ensuring compliance and quality of data publication.

Harmonized Data

Type	Data Object

Data that has been standardized and integrated from multiple sources to ensure consistency and compatibility across datasets.

Ingested Data

Type	Data Object

Data that has been collected and integrated into a system for further processing or analysis.

Ingested Data Source

Type	Application Service

A data source that has been collected and integrated into a system for analysis or further processing.

Ingestion frequency

Type	Application Process

The rate at which new data is collected and integrated into a system or database for further processing.

Ingestion Pipeline

Type	Application Process

> A sequence of steps that facilitate the input and integration of data into a system for processing and analysis.

Ingestion Pipeline Component

Type	Application Component

> A module or system responsible for managing the sequence of steps involved in the collection and integration of data from various sources into a central system.

Interoperable metadata

Type	Application Process

> Metadata that is structured in a way that allows it to be used and understood across different systems, promoting data sharing and reuse.

Master Data

Type	Data Object

> Critical business data that is essential for operations, often shared across multiple systems and processes within an organization.

Persistent identifiers

Type	Application Process

> Unique and persistent identifiers assigned to data or digital objects to ensure their long-term accessibility and referenceability, such as URN, DOI and ORCID

Processing

Type	Application Process

> The sequence of actions applied to data to analyze, enrich and convert the data to support the intended use case

Querable Data Stream

Type	Data Object

> A data stream that can be queried or accessed in real-time for analysis or monitoring purposes.

Querable Structured Data

Type	Data Object

> Structured data that can be easily queried, analyzed, and used in various applications and systems.

Raw Data

Type	Data Object

Unprocessed data that has been collected directly from the source without any transformation, cleaning, or aggregation.

Raw Data Source

Type	Application Service

A source of unprocessed or untransformed data, typically collected directly from the origin systems or devices.

Smart Data

Type	Data Object

Data that has been enriched with additional context or metadata to enhance its value and facilitate advanced analysis or decision-making.

Smart Data Source

Type	Application Service

A data source that has been enriched with additional context, metadata, or intelligence to enable more advanced analysis or decision-making.

Structured Data Dump

Type	Data Object

A collection of structured data exported from a system or database, typically used for backup, analysis, or migration purposes.

Synthesizing

Type	Application Process

The process of combining different data sources to generate new insights or data products.

Transformation

Type	Application Process

The process of converting data from one format, structure, or model to another for compatibility or analysis purposes.

Validation

Type	Application Process

The process of checking the accuracy and integrity of data to ensure it meets the required standards and specifications.

Verification

Type	Application Process

The process of confirming that data or processes meet defined requirements and specifications, typically in quality assurance.

Workflow Management

Type	Application Process

> The process of organizing and optimizing the flow of tasks and information in a data processing pipeline or system.

Technology & Physical Layer

Technology Service

Type	Technology Service

Access Management

Type	Technology Service

> Services and tools that manage user access to systems and data, ensuring proper authentication and authorization. Access can be managed on service, API or dataset level using Resource Entitlement Management Systems.

Analytics

Type	Technology Service

> Data storage that integrates data from multiple sources, optimized for reporting and analysis.

APIs

Type	Technology Service

> Application Programming Interfaces that allow different software applications to communicate and interact with each other, enabling integration and functionality sharing.

Application Interface

Type	Technology Service

> The point of interaction between different software applications, enabling them to communicate and exchange data.

Code Repository

Type	Technology Service

> A storage location for software code, enabling version control, collaboration, and management of codebases.

Collaborative Wiki

Type	Technology Service

> A web-based platform that allows multiple users to create, edit, and share content collaboratively in real-time.

Columnar

Type	Technology Service

> Database where data is stored in columns instead of rows to optimize certain types of queries, analytic workflows and data manipulation operations.

Data Governance Systems

Type	Technology Service

> Software systems designed to manage, monitor, and enforce data governance policies and practices within an organization.

Data ingestion

Type	Technology Service

> The process of importing, transferring, loading, and processing data for later use or storage in a database or data warehouse.

Data mining

Type	Technology Service

> The practice of examining large datasets to discover patterns, trends, and insights that can inform decision-making.

Data Processing Platform

Type	Technology Service

> A software platform that provides tools and infrastructure for processing, analyzing, and managing large volumes of data.

Data Provenance

Type	Technology Service

> The documentation of the origin, lineage, and history of data, ensuring its authenticity and traceability throughout its lifecycle.

Data Storage

Type	Technology Service

> Systems used to store data, including different types of databases, data warehouses, data lakes, cloud storage solutions. Categorization The list is endless.

Data Workflow Repository

Type	Technology Service

> A system that stores and manages workflows related to data processing, ensuring efficient and repeatable data operations.

Database

Type	Technology Service

> An organized collection of structured information or data, typically stored electronically in a computer system.

Devices

Type	Technology Service

Hardware tools and equipment used for data collection, processing, and storage, such as sensors, computers, and mobile devices.

Dimensional

Type	Technology Service

Relational database that uses a dimensional data model to organize data. This model uses fact tables and dimension tables using different schema models such as star model, snowflake, galaxy or data cube schema. A dimensional database is the optimal type of database for data warehousing.

Document

Type	Technology Service

A type of database designed to store, retrieve, and manage document-oriented information, typically in formats like JSON or XML.

Documentation & Support Systems

Type	Technology Service

Software tools and systems that provide documentation, help resources, and support for users managing data systems and infrastructure.

Domain solutions

Type	Technology Service

Specialized software or systems designed to address specific needs or challenges within a particular domain or industry.

Event streaming

Type	Technology Service

The continuous flow of data generated by events, typically processed in real-time for immediate analysis and response.

FAIR publication system

Type	Technology Service

A system designed to publish data in accordance with FAIR principles, ensuring data is findable, accessible, interoperable, and reusable.

Fairdata platform

Type	Technology Service

A platform designed to manage, store, and provide access to FAIR data, ensuring compliance with FAIR principles.

Filesystem

Type	Technology Service

A method and data structure that an operating system uses to control how data is

stored and retrieved on storage devices.

Graph

Type	Technology Service

A type of database that uses graph structures with nodes, edges, and properties to store and represent data, enabling efficient querying of relationships.

Identity Management

Type	Technology Service

Services and systems that manage user identities and control access to resources based on authenticated identities.

Issues & Feedback

Type	Technology Service

Systems and processes that collect, manage, and respond to user-reported issues and feedback regarding data systems and services.

Key value

Type	Technology Service

A type of NoSQL database that stores data as a collection of key-value pairs, allowing for simple and fast data retrieval based on unique keys.

Learning Portal

Type	Technology Service

An online platform that provides educational resources, training materials, and learning modules for users and stakeholders.

Ledger

Type	Technology Service

Immutable record-keeping system that is permanent and immune to data corruption and provides strong gaurantees about the lineage of data. Ledgers can be both centralized or decentralized.

Machine Actionable Interface

Type	Technology Service

Interfaces that allow machines to interpret and act upon data or commands without human intervention, facilitating automation and integration.

Machine learning

Type	Technology Service

A subset of artificial intelligence that involves the development of algorithms that can learn from and make predictions or decisions based on data.

Metadata Crosswalks

Type	Technology Service

> Tools or processes that map metadata elements from one schema or standard to another, enabling interoperability and data integration across different systems.

Metadata Management Systems

Type	Technology Service

> Systems that manage metadata, ensuring it is properly collected, stored, and accessible for data governance and usage.

Models & Schema Repositories

Type	Technology Service

> Structured representations of data that define the organization, relationships, and constraints of data elements within a system or application.

Notebooks

Type	Technology Service

Object

Type	Technology Service

> A storage architecture that manages data as objects, each containing the data itself, metadata, and a unique identifier, suitable for large-scale unstructured data.

Ontology Development

Type	Technology Service

> Formal representations of knowledge as a set of concepts and the relationships between them, used to model domain knowledge for data integration and semantic interoperability.

Operational

Type	Technology Service

> Data storage systems designed to update data in real-time

PID Management

Type	Technology Service

> Process and systems for managing Persistent Identifiers (PIDs) to ensure unique, long-lasting references to digital objects or data.

PID Resolver

Type	Technology Service

> A system or service that resolves Persistent Identifiers (PIDs) to their corresponding digital objects or data locations.

Preservation system

Type	Technology Service

> Systems and processes designed to maintain and protect digital data over time, ensuring its accessibility and integrity for future use.

Process engine

Type	Technology Service

> Software that manages and executes business processes, often using defined workflows to coordinate tasks and data flows.

Property graph

Type	Technology Service

Provenance Systems

Type	Technology Service

> Systems that track the origins, movement, and transformations of data. These include data lineage systems as well as the provenance of code and the deployment and usage of the systems used to manage the data.

Publication system

Type	Technology Service

> Systems that manage the dissemination and distribution of data, content, or research outputs to end-users or the public.

Publishing platform

Type	Technology Service

> Software systems that facilitate the publishing and distribution of data, content, or services to end-users.

Quality assurance

Type	Technology Service

> Processes and systems designed to ensure that data and data-related processes meet defined quality standards and requirements.

Reference Data & Taxonomies

Type	Technology Service

> Standardized sets of data and classification systems that provide a consistent framework for data categorization and analysis across different systems.

Relational

Type	Technology Service

Research notebooks

Type	Technology Service

Scientific computing

Type	Technology Service

> The use of advanced computing capabilities such as parallel processing or quantum computing to understand and solve complex scientific problems through simulations, modeling, and data analysis.

Sensors

Type	Technology Service

> Devices that detect and measure physical properties, converting them into data that can be analyzed and used for monitoring and decision-making.

Source systems

Type	Technology Service

> Original systems where data is created or initially stored, serving as the primary data sources for data integration and processing.

Spatiotemporal

Type	Technology Service

> Designed to efficiently store, query, and process spatial and temporal data, such as observations, time series, geoinformation, historical locations and events etc.

Specialized

Type	Technology Service

> Data storage system designed and optimized for different use cases. This type of data storages can also be hybrid, multimodal and used both in operational or analytic use cases.

Staging System

Type	Technology Service

> A system used to temporarily store data before it is processed and moved to a final destination, often used in data warehousing and integration.

Technology Service

Type	Technology Service

Technology Service

Type	Technology Service

Vector

Type	Technology Service

> Data structures used to store and manipulate mathematical vectors, often used in machine learning and data analysis applications.

Virtual Research Environment

Type	Technology Service

> A digital platform that provides researchers with tools, resources, and collaborative spaces to conduct and manage research activities.
